INDICATORS TRIGGERED

X New Cases Per Capita   X Outpatient Visits

X Increase in New Cases   • Hospital Admissions

X Non-Congregate Cases   • ICU Bed Occupancy

X Emergency Room Visits

During the past month, **Hamilton County's** COVID-19 cases have increased, along with several other healthcare indicators. At the end of May and into early June, Hamilton County was holding steady at an average of 30 cases per day. As of this past week, the average new cases per day has more than quadrupled to more than 120 cases per day. The increase in cases is not entirely due to increased testing as evidenced by other healthcare metrics. For example, people are visiting the emergency department more often with COVID-19 symptoms. On June 9, the average number of emergency department visits was 8, nearly tripling to 22 visits on June 29. More people are also being diagnosed with COVID-19 after visiting their doctors. From June 9 to June 29, those numbers more than tripled from 38 to 147 visits per day. Hamilton County has also seen a high percentage of its cases outside of congregate settings — ranging from 89% to 97% over the past three weeks. Recent non-congregate outbreaks in Hamilton County have included workplace, faith-based, restaurant, and retail settings.
